True discrimination rates estimated by .632 estimator with 28 kinds of variable combinations
■🔲output form = { { variable1, variable2, variable3, …. }, {estimated total hit rate, estimated HREC, estimated HRDC, estimated sensitivity, estimated specificity}}

▫ Dage = donor age, artery = number of renal artery, Kiddismax = maximum thickness of medial perinephric fat,

Kiddis内 = medium thickness of medial perinephric fat, RFAaround = area of perinephric fat, RCTaround = mean CT value of perinephric fat,

AFAaround = area of subcutaneous fat on midline, TP01 = total protein, TC01 = total cholesterol
